

Horizon D-L3

Digital Panoramic Camera

ZENIT

Following its tradition, **Zenit** introduces a new model of panoramic camera for the Horizon series. The **Horizon D-L3** digital camera completes the series of the Horizon models that are still in production, giving all the lovers of panoramic photography the opportunity of using a new digital quality tool rich in innovative solutions.

HORIZON D-L3 is a first step in a new era for panoramic photography in Russia. With the **HORIZON D-L3** the principles that made the camera simple and instantaneous to use without sacrificing quality, were maintained. The project developed in **Joint Venture** with **Silvestri** Italy is based on a three digital modules system giving the simultaneous acquisition of 3 images. This makes it possible to shoot freehand subjects of all kind, including those in motion.

The 28mm equivalent lens, designed to correspond to the resolution of the CMOS sensors, represents the qualifying element of the camera. The quality of the Russian optics is well known and has always been appreciated worldwide. The Zenitar 28mm f 3.5 equivalent becomes a great strong point compared to the more modest offers of the market.

Horizon D-L3

Digital Panoramic Camera

The optical viewfinder with top level, part of the HORIZON constructive tradition, is the continuity in the innovation. A large touch screen display gives access to the menu's options and to the images' viewing.

A specific stitching software is supplied with the camera, making the stitching operation fast and easy to complete on the PC.

Technical specifications:

- > Description: Digital Panoramic Camera
- > Angle of field: 120° x 45°
- > Lenses: Zenitar 28mm (equivalent) f. 3,5
- > 4,3" Touch Screen Display
- > Lithium battery (type Canon BP 915)
- > SD memory card
- > Three 5 Mpix CMOS Sensors
- > Dimensions: 110x90x195mm
- > Weight: Kg. 0,900 (including the lithium battery)
